Description

Moore Industries’ universal SLD PC-Programmable Functional Safety Loop Display features a large integral display that shows real-time process status in mA, percent, or any designated 5-character Engineering units (EGU). The SLD is part of Moore Industries’ FS Functional Safety Series products. It is certified by exida as a SIL3 capable, non-interfering device for use in a safety loop.

The SLD Functional Safety Programmable Loop Display is the perfect solution to accurately and reliably display process status in a safety loop:

- Displays information with phenomenal accuracy
- Flexible enough to mount anywhere
- Select a square root or linear curve from the library or quickly create a custom one
- Easy-to-read display with two rows of large characters
- DTM programmability allows the SLD to be custom scaled to display percent or scaled directly in engineering units

Features

- **SIL3 Capability.** The SLD is certified by exida for non-interference in a safety loop. (It is not SIL3 assessed or certified to be used as part of the safety function).

- **Easy-to-read, customizable display.** The SLD’s independently configured display features two rows of large characters that can be clearly read in the field and set to display any EGU.

- **360° flexible mounting.** When placed into one of our housings, the SLD can be mounted at any angle in nearly any environment.

- **Low voltage drop.** Loop-powered by less than 2.3 Volts, the SLD can even be installed on burdened loops.

- **Loop Maintenance Zener Diode Option.** Allows the SLD to be removed from the loop for maintenance without interrupting your safety function.

- **Custom and square root curves.** Select a square root or linear curve from the library, or create your own. Use our software to input a table in one EGU and have the PC program convert it into a different EGU for display.

Figure 1. The SLD is available complete in our BH housing: an explosion-proof enclosure that protects your display in even the harshest field environments.
SLD Functional Safety Programmable Loop Display

- **RFI/EMI immunity.** The SLD is resistant to the harmful, unpredictable effects of radio frequency and electromagnetic interference.
- **Superior Accuracy.** The loop-powered SLD reads any 4-20mA signal and displays the information with phenomenal accuracy of ±0.012% of input scale.
- **Easy Calibration.** A single button on the front of the unit allows you to easily calibrate your loop by displaying the loop current in mA with three-decimal-place accuracy.
- **Superior Reliability.** Up to 5 years between scheduled calibrations.

▶ Simple PC Setup

The SLD Functional Safety Programmable Loop Display is DTM programmable. You can program it with any FDT compliant host or program such as PACTware utilizing our DTM (Figure 2) and USB communication cable.

**DTM Programmable for Fast and Accurate Configuration—** Using the DTM, the SLD can either be custom scaled to display in a percent or scaled directly into engineering units for indicating any process measurements such as pressure, temperature, level, or flow. Span, zero, input range, display range, and filtering frequency can also be easily programmed. The SLD even allows the capturing of the input range limits of the loop to provide you with the most accurate display available.

**FREE PACTware Configuration Software with Versatile Programming Options—** Download PACTware software for FREE from our website which allows you to set up all display settings utilizing our DTM’s easy to use pull down menus (Figure 2).

**Quick Transmitter/Configuration Upload/Download—** PACTware offers one button uploading and downloading of transmitter configuration.

**Toolbar for Frequently Used Commands—** A conveniently located toolbar provides quick access to often used configuration functions.

**Real-Time Process Readout—** The process measurement and the communication status between the SLD and PACTware can be viewed in a one-page window.

**Store, E-mail, Download and Print Files—** The configuration you’ve created may be downloaded to any number of transmitters, saved, e-mailed, or printed for record keeping.

Monitoring Critical Functions

The SLD, a member of the FS Series product line, is designed and built in compliance with IEC 61508, the leading worldwide functional safety standard. The SLD is a non-interference device and can be taken out of the loop with the –LMD option (Loop Maintenance Diode) without affecting the integrity of the SIF (Safety Instrumented Function) loop. The example shown in Figure 3 demonstrates the SLD in a SIF. It is used to display a critical tank level at eye level for plant personnel.

Figure 3. With the –LMD option the SLD can be removed from the safety loop without affecting the integrity of the SIF.

The FS Functional Safety Series

Safeguard your processes when you need it the most. Our line of SIL 2 and 3 capable instruments include Trip Alarms, Safety Relays, Isolators, Temperature Transmitters, Frequency Transmitters, and Indicators. Each has been built to strict IEC 61508 standards, and exida certified, ensuring safe and reliable function – particularly in environments where hazardous or emergency situations are likely to occur.

Learn more at www.miinet.com/safetyseries or ask your rep for a copy of our Functional Safety Line Card.
