FOR IMMEDIATE RELEASE

**Moore Industries Voted Top in Signal Conditioners in
2011 Control Magazine Readers' Choice Awards**

NORTH HILLS, CALIF.—Moore Industries-International, Inc. has been voted #1 in Signal Conditioners in the 2011 *Control Magazine* Readers' Choice Awards. The awards represent the collective opinion of over 1,000 process automation professionals.

"To be mentioned in these Readers' Choice Awards at all, regardless of position, means that the solution provider has not only consistently provided exceptionally fine quality products and service, but also has demonstrated those capabilities to a large number of very loyal end-user customers," the *Control Magazine* article stated. These are the suppliers who have consistently demonstrated excellence in customer service and responsiveness."

Moore Industries provides [signal interface instruments](#) that convert, isolate, split, boost and step down process signals so field instruments can interface directly with indicators, recorders, DCS, PLC, and PC-based SCADA systems. This includes the company's [miniMOORE](#) family of multi-channel signal isolators and converters. The high-density miniMOORE signal conditioners deliver up to four low-cost I/O channels in a 1 inch (25.4 mm) footprint, which equates to 0.25 inches (6.35 mm) per channel.

To view the industry's number one line of signal conditioners according to the readers of *Control Magazine*, go to the Moore Industries Signal Conditioner Selection Index at: http://www.miinet.com/products/sg_signal.shtml. In addition to the online product index, *Signal Isolators, Converters and Interfaces: The "Ins" and "Outs"*, a Moore Industries whitepaper, is available for download.

To view the complete 2011 *Control Magazine* Readers' Choice Awards article, go to their website and download the January 2011 issue in PDF or Flash at: <http://www.controlglobal.com/issues/current.html>.
