

Demand Moore Reliability

Minimize Mine Downtime with Advanced Device Couplers

FOUNDATION Fieldbus and PROFIBUS networks can offer tremendous installation and operational cost savings in mining applications.

Device couplers are at the heart of the H1 and PROFIBUS PA networks. These devices connect all of your valves and transmitters to the Fieldbus Host. The TG 200 device coupler from MooreHawke offers industry leading advances in auto-termination and short circuit protection. The patented auto-termination feature with MooreHawke's device couplers saves a considerable amount of startup time. Moreover if breaks or short-circuits occur on your field spurs, these device couplers use a unique fold back technique that minimizes current draw and voltage dips on the network, which in turn minimizes catastrophic network failure.
