

Complementary Instruments and Accessories

C1: Indoor Convenience - Outdoor DIN Protection

Problem: I like the convenience of DIN Rail-Mount instruments but I need a way to mount them into a field location inside a NEMA 4X enclosure and still be able to read the displays.

Solution: Our R-BOX field-mount enclosure meets NEMA 4X, IP66 requirements and offers built-in DIN or G-type rail mounts for easy field installation. Four standard sizes (3", 6", 9", 12") accommodate a wide range of process instruments. The clear front panel allows full view of your indicating instruments without opening the cover.

Ideal for all of your DIN style instruments!
