

### Smart HART Transmitters, Monitors, and Interfaces

#### H3: Prevent False Shutdowns

**Problem:** Noncritical false shutdowns are costing us a lot of money. We need a reliable way to prevent nuisance shutdowns but insure that we take action on a real process problem.

**Solution:** If the transmitter is configured to fail high, some control systems have difficulty distinguishing between a high process condition and a failed transmitter. Use the SPA HART transmitter Fault Relay to provide the control system with clear indication of a failed transmitter. The control system can now differentiate between a transmitter failure and a high process condition and take different control action.

#### Model Number Example

SPA / HART / 4PRG / U / -AO [DIN]
