

Smart HART Transmitters, Monitors, and Interfaces

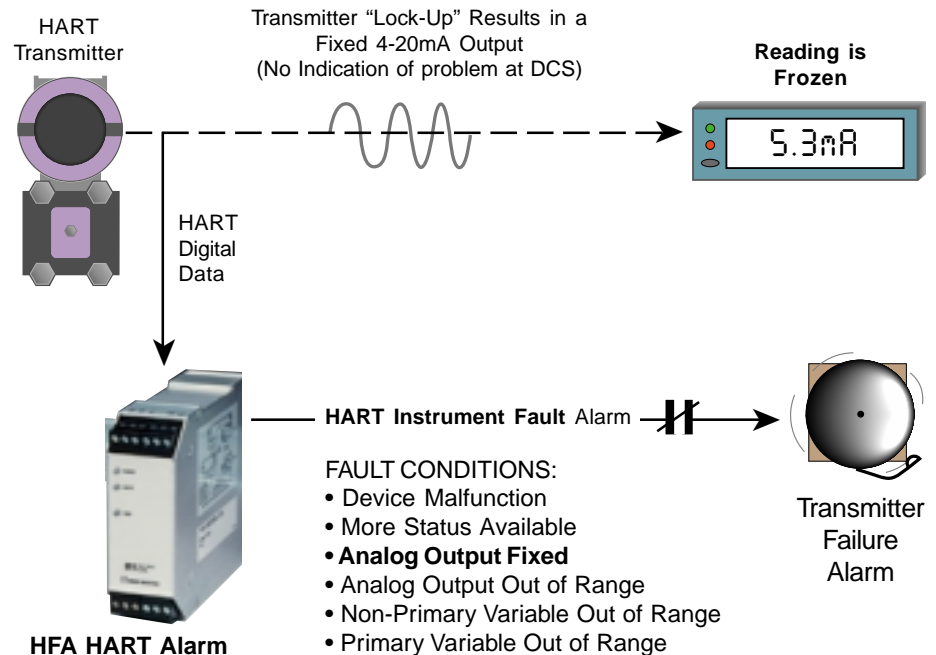

H6: Monitor the “Health” of Your HART Instrument

Problem: Our HART transmitter can be set to drive upscale or downscale on sensor failure but I know there are many other things that can go wrong. I would like to increase the reliability of this measurement.

Solution: The HFA Instrument Fault Alarm reads the digital diagnostic information from your HART Transmitter 24-hours-a-day. It warns you of six different instrument problem/failure situations. In this case a fixed analog output.

Model Number Example

HFA / HART / 1PRG / 24DC [DIN]
