

Temperature Transmitters and Assemblies

T2: Get the Average of Three RTD Signals

Problem: We need to replace obsolete computing modules used to calculate the average temperature in our oven. Is there a better way to accomplish this averaging?

Solution: One Moore Industries SPT can take the three RTD signals, calculate their average, then display and retransmit the value to your DCS or recorder.

**SPT Site-Programmable, Universal
Temperature Transmitter**

Model Number Example
SPT / TPRG / PRG / U [DIN]
