Product News for the Instrumentation, Control and Automation Engineer

JANUARY 2000 Volume 48 Number 1

**SMART TEMPERATURE TRANSMITTER**, TD2, supplies up to ±0.025°F and ±0.016°C accuracy and exceptional stability specifications that allow up to five years between calibrations. It features a two-line, digital display that shows real-time process status and valuable loop diagnostic information. Its alphanumeric characters can be customized to display input, 4-20 mA output, degrees C or F. **Moore Industries-International**, 10550 Schenck St., Sepulveda, CA 91347. **Write-in 1 or www.ianmag.com/info**

**ETHERNET-READY MODULE**, BFOOT-10501, can be embedded into a wide range of products to allow them to be remotely monitored and controlled from any Internet browser. The matchbook-sized module has a 10Base-T interface so that it can be connected directly to any of hundreds of thousands of Ethernet networks around the globe. **Agilent Technologies**, 8600 Super Hill Rd., Everett, WA 98205. 425-335-2654. **Write-in 2 or www.ianmag.com/info**

**DATA RECORDER**, SIR-1000L provides 16 analog channels at 20 kHz, each with selectable ICP® input. Channels can be expanded to 32 channels of 20 kHz signal input or up to 128 channels at 5 kHz by adding SCK channel expansion units. The inherent qualities of the ICP sensor make it desirable for a range of engineering applications. **Sony Precision Technology America, Inc.**, 20381 Hermosa Circle, Lake Forest, CA 92630. 949-770-8400. **Write-in 3 or www.ianmag.com/info**

**CONNECTORS**, Cage Clamp Compact 809 Series, connect 28-12 AWG and have a current rating of 24 amps with a rated voltage of 500 V that is ideal for use in electrical appliances and small terminal blocks. **WAGO Corp.**, M120 W19120 Freistadt Rd., Box 1015, Germantown, MD 20876. 202-255-6222. **Write-in 4 or www.ianmag.com/info**

**ADJUSTABLE SPEED DRIVES**, AF-300 G11™ constant torque drives and the AF-300 P11 variable torque drives, use simple commands from local or remote keypads or from facility management systems to operate. Pre-loaded motor parameters and factory defaults are included for out-of-the-box installation. **GE Fuji Electric**, 1501 Roanoke Blvd., Ste. 435 Salem, VA 24153. 800-543-6196. **Write-in 5 or www.ianmag.com/info**

## This Month's Award Winners

**REMOTE WEB-BASED TESTING AND DEVELOPMENT PLATFORM**, from Electro Standards Laboratories, acts as a virtual engineering laboratory. **Write-in 7 or www.ianmag.com/info** Turn to page 41

**REDUNDANCY MANAGER AND RAIL SWITCH**, from Hirschmann, Inc., brings true Ethernet capability to industrial environments. **Write-in 8 or www.ianmag.com/info** Turn to page 43

**SERVER**, ILON™ 1000 IP, from Echelon Corp., connects everyday devices to the Web. **Write-in 9 or www.ianmag.com/info** Turn to page 45

**GE Fuji Electric**, 1501 Roanoke Blvd., Ste. 435 Salem, VA 24153. 800-543-6196. **Write-in 5 or www.ianmag.com/info**

**VISION-GUIDED MOTION** using Ethernet TCP/IP as an interface combines DVT's SmartImage sensors with ORMEC's family of motion controllers. The interface utilizes the Modbus TCP applications protocol to communicate over standard Ethernet TCP/IP machine control networks, and creates a simple, straightforward approach to implementing vision-guided motion applications. Using the Ethernet TCP/IP interface is faster than serial communications. It eliminates the need for extra code to parse and convert ASCII strings, and it makes it easier to interface the motion controller to multiple SmartImage

VISION-GUIDED MOTION using Ethernet TCP/IP as an interface combines DVT's SmartImage sensors with ORMEC's family of motion controllers.

The interface utilizes the Modbus TCP applications protocol to communicate over standard Ethernet TCP/IP machine control networks, and creates a simple, straightforward approach to implementing vision-guided motion applications. Using the Ethernet TCP/IP interface is faster than serial communications. It eliminates the need for extra code to parse and convert ASCII strings, and it makes it easier to interface the motion controller to multiple SmartImage
