Description
The HTZ Smart HART® Transmitter simultaneously measures humidity and temperature in industrial, commercial, manufacturing, and HVAC applications. Based on the humidity and temperature values, the HTZ also provides a dew point measurement as a calculated variable.

The 2-wire (loop-powered) HTZ features dual isolated and scaleable 4-20mA outputs proportional to two of the following (user-selectable): relative humidity (RH), ambient temperature or dew point calculation. The analog output signals are ready for direct interface with HART or non-HART based DCS, PLC and other computer-based systems.

Features
- The HTZ delivers exceptional measurement accuracy. The HTZ's high accuracy humidity, temperature and dew point measurements make it ideal for precision applications.
- Versatile programming options allow set up with a HART Communicator, a HART-based system or a PC on-site or from any point (with HART communications) on the 4-20mA wires of Analog Output #1.
- Simple maintenance is provided by humidity and temperature probes, as well as a RH sensor itself, that can be quickly removed for cleaning or replacement.
- Set input failure mode, using the Intelligent Configuration Software, for each 4-20mA output to drive upscale, downscale or hold the last value, should there be a sensor failure, or if the cable between the modules is disconnected.
- The HDM display module shows real-time status of relative humidity, temperature, dew point, analog output #1, analog output #2 or scrolls between all variables in four second intervals.
- The FLEX120 flexible extended sensor option gives you sensor access to locations where you can’t place the connection head such as suspended ceilings and to obtain mid-room readings.
- A wide ambient temperature operating range of -40°C to +85°C (-40°F to +185°F) allows installation in most all environments, indoors and outdoors.

Certifications
CE Conformant – EMC Directive 2014/30/EUEN 61326

HTZ
Smart HART® Humidity and Temperature Transmitter

Modular and Flexible Design
The HTZ Smart HART® Humidity and Temperature Transmitter consists of two components connected by a cable:

HSM Humidity and Temperature Sensor Module
Designed to mount on a surface (such as in duct ventilation systems) at the measurement site, the HSM has temperature and humidity probes that accurately collect and transmit real-time ambient conditions to the HDM Humidity and Temperature Display Module. Both probes can be removed for service and/or replacement. In addition, the RH sensor itself can be removed for replacement by unscrewing a removable, sintered filter at the end of the probe. The HSM comes in a rugged, NEMA 4X (IP66) enclosure that can be safely mounted outdoors and in wash-down areas.

An optional HSM Weather Shield protects the unit against solar radiation and precipitation (See Figure 4).

HDM Humidity and Temperature Display Module
The surface-mount or pipe-mount HDM can be installed at the measurement point, or as far away as 9 meters (30ft) from the HSM. The HDM features a programmable display that can be set to indicate humidity, temperature, dew point, analog (current) output #1, analog (current) output #2, or scroll between the five values at four second intervals. A custom engineering unit (EGU) can also be assigned to the displayed temperature variable. The HDM provides two loop-powered, isolated 4-20mA signals. Each output can be programmed to represent relative humidity, temperature or dew point.

Selectable Input Failure Mode—Each 4-20mA output can be set to drive upscale (selectable between 20.0-23.6mA), downscale (selectable between 3.6-4.0mA) or hold the last value should there be a sensor failure or if the cable between the HSM and HDM is disconnected.

The HDM comes in a field-mount, NEMA 4X (IP66) enclosure that can be mounted outdoors and in wash-down areas.

Connection Cable
The HSM connects to the HDM via a quick-connect IP66 cable that is available in 3m (10ft), a 6m (20ft) or 9m (30ft) lengths.
Flexible Sensor Cable Extension
The -FLEX120 option provides a flexible extension for your humidity and temperature sensors. Attached at the sensor connection head, it extends the sensor placement to locations as far as 120 inches (3.48 meters) away. This gives you access to locations where the connection head can’t be placed such as hung ceilings, and allows the sensors to be suspended to obtain readings mid-room at lower than ceiling heights. Being flexible, the sensors won’t break when bumped during facility changes in the rooms where they are placed.

FREE Intelligent PC Configuration Software with Versatile Programming Options

Our FREE Intelligent PC Configuration Software allows you to set up all transmitter settings from one PC window, in about one minute.

For programming from any access point on the loop, a HART-to-RS232 Smart Interface Cable (modem) can be purchased separately (see Ordering Information for details) to access the HTZ programming options. The HART modem can also be connected directly to the transmitter.

Once a configuration is created, it can be downloaded to multiple transmitters. The HTZ software also lets you save, E-mail, and print copies for documentation purposes. Just a few of the time saving and performance enhancing features include:

Set Up Safeguards—It is nearly impossible to make incompatible configuration selections.

Transmitter/Configuration Auto Recognition—
The program software automatically recognizes the transmitter model and its configuration parameters.

Toolbar for Frequently Used Commands—
A conveniently located toolbar provides quick access to often used configuration functions.

Real-Time Process Readout—The process measurement and the communication status between the transmitter and PC is continually shown on the software window.

Precise Digital Output Trimming—This essentially eliminates the impact of measurement errors introduced by inaccurate readout devices.

Selectable Under Range, Over Range and Sensor Failure Values—By setting different default values for each condition, you can distinguish between the failure modes when they occur.

Store and Print Files—The configuration record you’ve created may be downloaded to any number of transmitters, stored for recordkeeping or printed.

Figure 6. PC Configuration Software
HTZ
Smart HART® Humidity and Temperature Transmitter

Figure 7. The HTZ Smart HART Humidity and Temperature Transmitter programs to provide dual 4-20mA signals proportional to relative humidity, temperature or dew point (user-selectable).

Set Up with HART Communicator, DCS, Asset Management System (AMS) or PC
The HTZ can be programmed on-site in minutes using our free Intelligent PC Configuration Software or HART, or from anywhere on the 4-20mA loop using HART communications. For remote programming, you can use a standard hand-held HART Communicator, a HART-based control system, or an Asset Management System (AMS).

HTZ Device Description (DD)
Moore Industries’ HTZ Device Description (DD) is the device-specific programming information that is loaded into a standard HART Communicator. It allows access to all of the unit’s programming functions.

How to Determine if Your HART Communicator Has a HTZ Device Description
Hand-held HART Communicators typically feature a list of companies in a DD library. The Moore Industries HTZ will appear if you have the proper DD installed. If the hand-held does not have the proper DD, contact the Moore Industries Interface Solution Center nearest you. If you are using an Emerson Process Management Model 375 HART Communicator, the DD can be found on the configuration tools CD that comes free with the HTZ, or you may download the latest HTZ DD from our web site at: www.miinet.com

Also Programs with the Generic HART DD
Even if your communicator is not up to date, most of the important programming features can be accessed without the HTZ DD by using the “Generic” HART DD available on HART Communicators.

### Dewpoint Calculation

**Equation 1. Dew Point Calculation**

\[
EW = 10^x \cdot (0.66077 + (7.5 \cdot T / (237.3 + T))) \quad \text{This is the saturation vapor pressure over water}
\]

\[
EW_{\text{RH}} = EW \div RH / 100 \quad \text{Multiply EW with RH}
\]

\[
\text{Dew Point (Dp)} = (0.66077 - \log (10 \cdot EW_{\text{RH}})) \cdot 237.3 / \log (10 \cdot EW_{\text{RH}} - 8.16077)
\]

---

* High accuracy relative humidity measurements are achieved within a RH range of 33-75% using the trimming feature of Moore Industries’ Intelligent PC Configuration Software with the RH sensor calibrated against a controlled RH environment (See the -VTB option under “Sensor Length/Calibration” in Ordering Information). High accuracy temperature measurements are achieved using the trimming feature of the Intelligent PC Configuration Software with the temperature sensor immersed in a temperature calibration bath (Sensor-to-Transmitter matching factory calibration; See the -VTB option under “Sensor Length/Calibration” in Ordering Information). High accuracy dew point measurements are achieved using the trimming feature of the Intelligent PC Configuration Software at 25°C, between 40-90% RH. Stated accuracies do not include ambient temperature effects.

---

### Dew Point Calculation

- **Conditions**
  - **Operating Range:**
    - -40°C to +85°C
    - (-40°F to +185°F)
  - **HDM Storage Range:**
    - -40°C to +85°C
    - (-40°F to +185°F)
  - **HSM Storage Range:** Referred to temperature and RH inputs
  - **Recommended 10-50°C, (50-122°F), 20-60%RH; Maximum 0-80°C, (32-176°F), 0-95%RH
  - **Humidity Sensor Operating Range:**
    - 0-95% relative humidity, non-condensing
  - **RFI/EMI Protection:**
    - 20V/m@80-1000MHz, 1kHz AM, when tested to IEC61326, 1998
  - **Adjustments:**
    - All adjustments made using Moore Industries’ Intelligent PC Configuration Software or HART-enabled hand-held or host
  - **Indicators:** LCD: 2x5 14-segment characters, alphanumeric readout accurate to the nearest digit.
    - **Range:** -99999 to 99999; Decimal point can be user-set
  - **HDM:**
    - 918g (32.4 oz)
  - **HSM:**
    - 618g (21.2 oz)
  - **Weight:**
    - 1.45 lbs
  - **Cable:**
    - 3m, 250g (8.8 oz)
    - 6m, 454g (1.0 lbs)
    - 9m, 658g (1.45 lbs)
## Ordering Information

**IMPORTANT:** Specify ONE HSM Humidity and Temperature Sensor Module and ONE HDM Humidity and Temperature Display Module for each HTZ system. HSM and HDM modules cannot be used independently of one another, but can be ordered separately as replacement modules.

**HSM**
Humidity and Temperature Sensing Module
(One HSM is required per installation)

**HDM**
Humidity and Temperature Display Module
(One HDM is required per installation)

**To order, specify:** Unit / Input / Output / Power / Sensor Length / Options [Housing]
**Model Number Example:** HSM / PT-RH / HDM / HDM / -CL12 -VTB [LH3Z]

**Unit**
HDM Humidity and Temperature Display Module
(One HDM is required per installation)

**Input**
HSM Signal input from the HSM Module

**Output**
2X4-20MA Dual isolated, scaleable 4-20mA outputs user-selectable for two of the following: Relative Humidity Temperature Dew Point

**Power**
12-42DC

**Cable Length**
3M 3m (10ft) connection cable
-6M 6m (20ft) connection cable
-9M 9m (30ft) connection cable

**Housing**
D3LCP Surface/pipe-mount enclosure (NEMA 4X, IP66) includes 2-inch pipe-mount hardware

**To order, specify:** Unit / Input / Output / Power / Connection Cable Length [Housing]
**Model Number Example:** HDM / HSM / 2X4-20MA / 12-42DC / -3M [D3LCP]

## Accessories

Each HTZ order comes with one copy of our Intelligent PC Configuration Software (Windows® compatible). Use the following information to order additional parts:

### Replacement Parts and Accessories:

- P/N 238-801-34 - Temperature (RTD) Probe (6-Inch)
- P/N 238-801-04 - Temperature (RTD) Probe (12-Inch)
- P/N 238-801-24 - Temperature (RTD) Probe (18-Inch)
- P/N 238-801-36 - Humidity Probe (6-Inch)
- P/N 238-801-06 - Humidity Probe (12-Inch)
- P/N 238-801-26 - Humidity Probe (18-Inch)
- P/N 801-880-75 - Humidity Sensor (SHT75)
- P/N 208-802-20 - Replacement HDM Electronics, Display in HP (Hockey-Puck) Housing with Spring Clips
- P/N 803-847-26 - Replacement 3m (10ft) Connection Cable
- P/N 803-862-26 - Replacement 6m (20ft) Connection Cable
- P/N 803-863-26 - Replacement 9m (30ft) Connection Cable

* Return to the Factory for replacement and recalibration.

## Programming Accessories:

- P/N 803-040-26 - Non-Isolated PC Configuration Cable
- P/N 803-039-26 - Isolated PC Configuration Cable
- P/N 235-829-02 - PC-Programming Kit includes one copy of our Intelligent PC Configuration Software and one HART-to-RS232 Cable with HART modem
- P/N 803-048-26 - HART-to-RS232 Smart Interface Cable with HART Modem
- P/N 804-021-26 - HART-to-USB Smart Interface Cable with HART Modem
- P/N 804-030-26 - Fuse Protected, Non-Isolated USB Communication Cable
- P/N 803-048-26 - HART-to-RS232 Smart Interface Cable with HART Modem
- P/N 804-021-26 - HART-to-USB Smart Interface Cable with HART Modem
- P/N 804-030-26 - Fuse Protected, Non-Isolated USB Communication Cable
