Description
Moore Industries’ Smart HART® Temperature Transmitters configure in minutes to accept a direct signal input from nearly every available RTD and thermocouple, as well as from ohm and mV sources. Universal and microprocessor-based, they provide an isolated and linear 4-20mA output proportional to the input. This signal is ready for direct interface with HART or non-HART based DCS, PLC and other computer-based SCADA systems.

Easy-to-Order Temperature Assemblies
One simple model number is all it takes to order our complete temperature assemblies. They come configured, calibrated, wired and ready to install in your process. See our RTI1 and RTI2 Ready-to-Install Temperature Transmitter Assemblies data sheets for details.

Features
• Input-to-output analog accuracy of up to ±0.014°C (±0.025°F)* is the absolute best in the industry.
• 20-bit input resolution delivers exceptional digital accuracy of ±0.1°C (±0.18°F) with all Pt RTDs, or up to ±0.05°C (±0.09°F)* for Pt1000 RTD.
• Set up with HART Communicator, HART-based system, or PC allows you to check the status, or perform parameter changes, from the control room or any field termination point on the 4-20mA wires.
• Long-term stability provides up to 5 years between scheduled calibrations.
• Standard integral displays show real-time process status and valuable loop diagnostic information.
• Advanced EMI/RFI protection and ambient temperature compensation guard against environmental factors that can quickly degrade measurement accuracy.
• PC software’s “HelpMap Navigation System” provides quick and complete answers to performance, setup, installation and maintenance questions.

Certifications
All product names are registered trademarks of their respective companies. HART is a registered trademark of the HART Communication Foundation.

*High-accuracy measurements are achieved by using a 4-wire, 1000 ohm platinum RTD with a span of 100°F (50°F minimum) calibrated in our sensor-matching calibration bath.
Set Up with HART Communicator, DCS, Asset Management System (AMS) or PC

Our Smart HART Transmitters can be programmed in minutes and interrogated at any time, from anywhere on the 4-20mA loop (see Figure 2). You can use a standard hand-held HART Communicator (such as a Model 275), a HART-based control system, an Asset Management System (AMS) or Moore Industries’ Intelligent PC Configuration Software to:

- **Program Input Type and Range**—Span, zero and input type values are all programmable.
- **Adjust Sensor Trim Offset**—Set an offset to compensate for measurement errors that are caused when a temperature sensor is not performing to its rated curve specifications.
- **Set Damping Time**—Eliminate imprecise readings caused by noise and other insignificant process fluctuations by setting a damping time between 1-30 seconds.
- **View Real-Time Process Values**—View the existing process value (in the appropriate engineering unit), lower and upper range values, actual output current and output current as a percentage of output span.
- **Choose Sensor Failure Mode**—If the input is lost, you have the choice of the output going upscale (to 23.6mA) or downscale (to 3.6mA).
- **Select Device Identification and Data**—Tag number (8 characters), configuration date, unit location code (16 characters), a message (32 characters), and polling address (0-15) are selectable.
- **Fix Output Current (Loop Test)**—To assist in calibrating your system, the THZ’s and TDZ’s current output can be fixed to a known value so you can check it against the value being read by your receiving device.

**Non-Volatile Memory**

If power to the transmitter is lost, the unit resumes normal operation with the parameters you’ve configured upon reapplication of power.

**Point-to-Point Loops Deliver Analog Simplicity with Remote Programmability**

In the majority of applications, the THZ or TDZ is installed on a point-to-point 4-20mA process loop like a regular analog transmitter (Figure 2). A HART Communicator or HART-based system is used to configure and view the transmitter’s operating parameters and diagnostic data from any point on the loop.

*Figure 2. From any point on the 4-20mA loop, you can view, test and change your transmitter’s operating parameters.*
Multidrop Networks Save Wiring Costs
Any combination of up to 15 THZ and TDZ smart transmitters connect in parallel onto a HART digital communication link (Figure 3). This means you can use a single loop, instead of 15 separate loops, to connect multiple transmitters. In a multidrop network, the transmitter's measured process variable is output digitally, so the 4-20mA signal (set to 4mA) is not used.

A HART-based control system uses each transmitter's individual address (1-15) to configure or view the transmitter's data. A HART Communicator can be used in this configuration to access information from, or transmit configuration information to the transmitter from anywhere on the HART loop.

HART Master/Slave Structure
To implement two-way communications between the THZ or TDZ and the device configuring or receiving its information, the transmitter operates in a HART Master/Slave structure.

The THZ or TDZ is a Slave (or Slaves in a multidrop network). There can be two Masters per system: a Primary Master and a Secondary Master. In the majority of applications, the Master is a HART Hand-Held Communicator, but it can also be a HART-based control system. Operating in HART's Poll/Response (Normal) Mode, the HART Master polls the THZ or TDZ two times per second to access the current process variable status, send setup data to the transmitter, or remotely view its identification, configuration and diagnostic data.

THZ & TDZ Device Description (DD)
Moore Industries' Device Description (DD) is the device-specific programming information that is loaded into a standard HART Communicator (such as the Model 275). It allows access to all of the unit's programming functions except the custom linearization table function. The THZ/TDZ DD is available on the HART Communication Foundation's October 1999 and later Device Driver Library release. We can update your Model 275 or configure your transmitter at any of our solution centers.

How to Determine if Your HART Communicator Has a THZ & TDZ Device Driver
To determine if your HART Communicator has the DD, press “1” to select “Offline” and press “1” again to select “New Configuration”. Select “Moore Industries” from the list of companies. The “THZ/TDZ” option will appear if you have the proper DD installed. To update your HART communicator with the latest DD, call our Interface Solution Center nearest you.

Also Programs with the Generic HART DD
Even if your communicator is not up to date, most of the important programming features can be accessed without the THZ/TDZ DD by using the “Generic” HART DD available on HART Communicators. Or you can order the unit factory-configured by Moore Industries with all of the parameters that are not accessible through the generic DD.
Trims to Respond to Specific Sensor Curve Segments

Most transmitter's zero and span values can be calibrated to measure a specific range within a sensor's overall curve capability. However, for even greater measurement accuracy, our transmitters trim capabilities go much further.

The THZ and TDZ can be trimmed with two data points within the selected zero and span measurement range. This advantage allows a complete process range to be monitored, while placing measurement emphasis on a specific segment of the range most critical to the process.

In the figure below, the actual sensor curve is used in place of the ideal RTD curve between 20°C and 27°C. This provides incredible precision over a limited portion of span, while measuring the remainder of the span with the THZ or TDZ's usual outstanding accuracy.

Total Sensor Diagnostics

These transmitters perform continuous sensor diagnostics. This patented Moore Industries feature can save you from costly lost production time and hours of troubleshooting. If the sensor breaks or otherwise stops sending a signal during operation, the transmitter sends the output upscale or downscale to warn of trouble, and provides a HART digital error message that can be read by a HART communicator or computer-based system. If the sensor being utilized is a RTD, the THZ or TDZ instantly displays the type and location of the error.

Precise Linearization and RJC

The THZ and TDZ use an advanced linearization method to minimize the conformance error. Its Reference (Cold) Junction Compensation techniques produce stable readings even in fluctuating ambient temperature conditions. For non-linear inputs, create custom linearization curves using our PC Configuration Software.
One Window. One Minute. One Set Up.

Intelligent PC Configuration Software
Our Intelligent PC Configuration software allows you (with the aid of our HART-to-RS232 Smart Interface Cable) to set up all your transmitter’s settings from just one window, in about a minute. Once a set up is created, it can be downloaded to multiple transmitters. Just a few of the time saving and performance enhancing features include:

Set Up Safeguards—It is nearly impossible to make incompatible configuration selections.

Transmitter/Configuration Auto Recognition—The program software automatically recognizes the transmitter model and its configuration parameters.

Toolbar for Frequently Used Commands—A conveniently located toolbar provides quick access to often used configuration functions.

Real-Time Process Readout—The process measurement and the communication status between the transmitter and PC is continually shown on the software window.

Precise Digital Output Trimming—This essentially eliminates the impact of measurement errors introduced by inaccurate readout devices.

Selectable Under Range, Over Range and Sensor Failure Values—By setting different default values for each condition, you can distinguish between the failure modes when they occur.

Store and Print Files—The configuration record you’ve created may be downloaded to any number of transmitters, stored for recordkeeping or printed.
GUIDES YOU FROM HOOK-UP TO START-UP

Just click the Help icon on the toolbar of our Intelligent PC Configuration Software, and up pops HelpMap, our searchable help system. It smoothly guides you from hook-up to start-up.

EASY TO USE—The revolutionary HelpMap system is remarkably intuitive. Based on the programming language used to design Internet web pages, it has all the functions you would expect from a high-powered help system with the ease and functionality of a web site.

IN-DEPTH EXPLANATIONS—The HelpMap is packed with overviews of specific features as well as step-by-step directions on how to configure, install, maintain and troubleshoot your transmitter.

INTUITIVE IMAGEMAPS—Point and click your way to any definition by using a picture of the Configuration Software from inside the HelpMap System. Just click on the part of the image that you need more information about.

ADVANCED SEARCH FEATURES—Our advanced search engine will search word-for-word through the help file to quickly find the necessary information. Combine this search engine with a complete index, and all the information for using the transmitter is available at your fingertips.

CONTEXT-SENSITIVE HELP—Need a quick definition? Concise information and software definitions regarding the part of the program you are using are available from our context-sensitive help system.
Specifications

HART Specifications
- Address Range: 0-15 (1-15 are for multidrop loops)
- Transmission Speed: 1200 baud
- Character Format: 1 Start Bit - 8 Data Bits - 1 Odd Parity Bit - 1 Stop Bit

Performance Input Accuracy:
See Table 1

Analog Output Accuracy:
±0.015% of span

Overall Accuracy:
The overall accuracy of the unit is the combined input and output accuracy. It includes the combined effects of linearity, hysteresis, repeatability and adjustment resolution. It does not include ambient temperature effect. For T/C input only, add the Reference Junction Compensation error

Reference Junction Compensation: ±0.45°C (±0.81°F)

Stability:
See Table 1

Isolation:
THZ in HPP: 1000Vrms input-to-output continuous; THZ in DIN: 500Vrms input-to-output continuous; THZ in DH and TDZ (all models): 500Vrms input-to-output continuous, and will withstand a 500Vac dielectric strength test for one minute without breakdown

Performance (Continued)

Response (Rise) Time:
100msec maximum for the output to change from 10% to 90% for an input step change of 0% to 100%

Step Response Time:
THZ: 600msec maximum, 500msec typical from the time an input is applied to the output reaching 90% of its final value

THZ in DH Enclosure & TDZ (all models):
700msec maximum, 500msec typical from the time an input is applied to the output reaching 90% of its final value

Ripple:
Less than 10mVp-p measured across a 250 ohm load resistor at frequencies up to 120Hz

Over-voltage
Protection: Input, ±5Vdc peak, maximum; Output, 48Vdc, maximum

Digital Input Filter:
User-programmable; 50/60Hz

Power Supply Effect:
±0.002% of span per 1V change

Load Effect:
Negligible within specified power limits

Load Capability:
Load = \frac{(Vdc - 12)}{0.024}

Burnout Protection:
User-programmable, Upscale to 23.6mA; Downscale to 3.6mA

Output Current Limiting:
3.8mA and 21.6mA for input over range; 25mA maximum

T/C Input Impedance:
40 Mohm nominal

RTD & Ohm Excitation:
250 microamps, ±10%

Resistance Maximum:
RTD resistance + 2X lead wire resistance should total <4000 ohms; Recommended lead wire resistance for three wire connections, <35 ohm/ wire; 10 ohm copper sensor lead wire resistance should total <5 ohm

Sensor Lead Resistance Effect:
2-wire sensors: Error = 1.0 ohm in reading/ohm of lead resistance; 3-wire sensors: Error = 1.0 ohm in reading/ohm of lead of unbalanced resistance; 4-wire sensors: No effect

Damping:
User set; 0-30 seconds

Resolution:
Input, 20-bit; Output, 16-bit

Supply Range:
12-28V I.S.; 12-42V normal operation

**Complete Temperature Assemblies**

Free yourself from the hassle of looking around for pieces and parts by ordering a complete assembly.

To complement our high-quality transmitters, we carry complete lines of RTDs, thermocouples, thermowells, connection heads and fittings. Get the quality you need and the options you require with the ease of just one ordering number!

For the best accuracy, have your transmitter and sensor calibrated together in our sensor-matching calibration bath.

See our RTI1 and RTI2 Ready-to-Install Temperature Transmitter Assemblies data sheets for details.

**Sensor-to-Transmitter Matching**

Our sensor matching process starts by immersing the temperature sensor into stabilized temperature baths in our calibration lab. The transmitter captures two points from the sensor and stores them in non-volatile memory. It then uses them to compensate for deviations between a sensor’s stated linearization curve and its actual measurements.

Sensor matching provides you with incredible accuracy at an affordable price. Accuracy varies with the sensor, so contact the factory for information on your sensor type.

                        - Encapsulated electronics resist the harmful affects of moisture and humidity that enter though the conduit connections.  
                        - Explosion-proof and very affordable general location (NEMA 4X, IP66) versions available.                                                                                                                     | Page 13    |
| **THZ in HPP**         | - Small size and protected, encapsulated electronics make this model ideal for integrating into industrial machinery, machine tools, facility monitoring systems and similar production and process equipment.  
                        - For retrofit applications, standard diameter and mounting hole dimensions allow easy integration into installed thermowell and remote-mounted connection heads.                                                | Page 14    |
| **THZ in DIN**         | - Only 25mm (1-inch) wide, this compact model is perfect for mounting in a control room, high-density instrument cabinet or field-mounted enclosure.  
                        - Universal mounting bracket easily snaps on and off of G-type and top hat DIN-rails, and standard relay tracks.  
                        - Metal, temperature-compensating terminal blocks provide exceptionally stable measurements even in fluctuating ambient temperature conditions.                                              | Page 14    |
| **TDZ in HP**          | - Mounts on a surface, on G-type or top hat rails and on relay track when on site display is needed in a control room, cabinet or enclosure.  
                        - Replacement transmitter installs in a Moore Industries BH or D-BOX enclosure and in other common field-mount instrument enclosures.                                                                            | Page 15    |
| **TDZ in BH**          | - Economical choice when reliable field protection and on site indication are required.  
                        - Modular transmitter electronics can be easily removed without disturbing the enclosure or sensor assembly.  
                        - Explosion-proof and economical general location (NEMA 4X, IP66) models available.                                                                                                                       | BH Page 15 |
| **TDZ in D-BOX**       |                                                                                                                                                                                                           | D-BOX Page 16 |

| TDZ Smart HART Temperature Transmitter with Display | PRG (see description above for details) | 4-20MA Scaleable to narrow ranges | 12-40-42DC I.S. & N.I. applications | -IFM FM approved Intrinsically Safe (I.S.) & Non-Incendive (N.I.) | DH Dual-Compartment Enclosure: DH2NG Explosion-Proof Dual-compartment enclosure with two, 1/2-inch NPT entry ports and a glass cover DH2TG Explosion-Proof Dual-compartment enclosure with two, 3/4-inch NPT entry ports and a glass cover DH2MG Explosion-Proof Dual-compartment enclosure with two, M20 x 1.5 entry ports and a glass cover DH Replacement transmitter module with out enclosure P suffix indicates enclosure is equipped with 2” pipe-mount hardware kit (DH2NGP) | *IFM only available with DH Dual-Compartment Enclosure |

### Additional Parts

Each order comes with one copy of our Configuration Software (Windows® compatible). The HART RS-232 Modem and the HART Communicator must be purchased separately:

P/N 235-820-02 - PC-Programming Kit includes one copy of our Intelligent PC Configuration Software and one HART-to-RS232 Cable with HART modem.

P/N 750-75E05-01 - Interface Solution PC Configuration Software on CD (One copy comes free with each order).

P/N 803-048-26 – HART-to-RS232 Smart Interface Cable with HART Modem.

### Model Number Example:

- **THZ** / **PRG** / 4-20MA / 12-30DC / -ISF [DH2NGP]
- **TDZ** / **PRG** / 4-20MA / 12-42DC [BH2NGE]

### To order, specify: Unit / Input / Output / Power / Option (Housing)

### DIN-Rail Mount, HPP and LH Connection Head:

- **DH** DIN-style aluminum housing mounts on 32mm G-type (EN50035) and 35mm Top Hat (EN50022)
- **HPP** Encapsulated hockey-puck housing for mounting in connection heads
- **LH1NS** Connection head (NEMA 4X, IP66) with two 1/2-inch entry ports and a PBT polyester cover
- **LH1MS** Connection head (NEMA 4X, IP66) with two 1/2-inch entry ports and a PBT polyester cover
- **LH2MS** Explosion-Proof connection head with two entry ports: M20 cable and 1/2-inch NPT and a metal cover
- **LH2MS** Explosion-Proof connection head with two entry ports: M20 cable and 1/2-inch NPT and a metal cover

### HP Hockey-Puck, BH and D-BOX Enclosures:

- **HP** Hockey puck housing and spring clips
- **DN** Snap-in mounting for HP case on TS-32 DIN-rail
- **FL** Mounting flanges on HP for relay track or screw mounting
- **FDL** Mounting flanges on HP for 3½” relay track mounting
- **BH2NG** Explosion-Proof enclosure with two 1/2-inch NPT entry ports and a glass cover
- **BH2TG** Explosion-Proof enclosure with two 3/4-inch NPT entry ports and a glass cover
- **BH2MG** Explosion-Proof enclosure with two M20 x 1.5 NPT entry ports and a glass cover
- **BH3NG** Explosion-Proof enclosure with three 1/2-inch NPT entry ports
- **BH3TG** Explosion-Proof enclosure with two 3/4-inch side-entry NPT ports, one 1/2” bottom port, and a glass cover
- **BH3MG** Explosion-Proof enclosure with two, M20 x 1.5 side-entry ports, one 1/2” bottom-entry port, and a glass cover
- **SB2NG** 2-Hub, Explosion-Proof enclosure with two, ½-inch NPT entry ports and a glass cover
- **SB2MG** 2-Hub, Explosion-Proof enclosure with two, M20 x 1.5 entry ports and a glass cover
- **D2LC** 2-Hub, low base, clear cover, IP66/NEMA 4X enclosure

(A suffix indicates SAA/TestSafe (Ex d) Flame-Proof approvals (i.e. BH2MGA)
(E suffix with BH denotes ATEX Flame-Proof enclosures; 2” pipe-mount kit included (BH2MGE)
(P suffix indicates enclosure is equipped with 2” pipe-mount hardware kit (BH2NGP)
Figure 7. Dimensions for the THZ in DH dual compartment enclosure

- **SIDE VIEW (INTERNAL)**: Modular transmitter electronics can be easily removed.
- **SIDE VIEW (NPT-PORT SIDE)**: Conduit/thermowell entries.
- **SIDE VIEW (BRACKET-MOUNT SIDE)**: Protective seal isolates and protects the transmitter’s electronics from humidity, moisture and corrosives.
- **TOP VIEW (GLASS COVER)**: Extra-large display with bar graph.
- **BOTTOM VIEW (COVER REMOVED)**: Captive screws for removing the THZ from the DH
- **SIDE VIEW (INTERNAL)**: Rugged screw-type connectors.
- **SIDE VIEW (INTERNAL)**: Sturdy glass cover.
- **SIDE VIEW (INTERNAL)**: Front screw-on cover.
- **SIDE VIEW (INTERNAL)**: Back screw-on cover.

Pipe or surface mounting plate.
Figure 8. Dimensions for the THZ in the LH connection head

- Safety Lock (LH2 only)
- Conduit Entry Port
- 9mm (0.35 in)

**FRONT**

- 87mm (3.44 in)

**SIDE**

- 30mm (1.2 in)
- 92mm (3.61 in)
- DIA. 72mm (DIA. 2.85 in)

**BOTTOM**

- 51mm (2.00 in)
- 61mm (2.4 in)
- 10-32 Mounting Holes (2)
- Metal Tag
- Process Connection
  - 1/2-in NPT (N and M models) or G½ (BSP) (C models)

**INSIDE**

- Instrument Mounting Holes
  - 40mm (1.56 in)
  - 33mm (1.30 in)
- I.D. 62mm x 19mm Deep
  - (2.43 in x 0.76 in Deep)
- Ground
- M4.0 x 0.7 (4 places)

**2-INCH PIPE MOUNTING HARDWARE**

- 84mm (3.30 in)
- 89mm (3.50 in)
- 2-in Pipe Bracket
- Mounting Holes (4)
- 61mm (2.40 in)

Certifications

Factory Mutual Approvals - FM Global Explosion-Proof & Dust-Ignition Proof
[TDZ-HP/BH and SB Housings, THZ-DH, THZ-HPP/LH2] –
Class I, Division 1, Groups A*, B, C, D
Class II & III, Division 1, Groups E, F, G
Environmental Protection: NEMA 4X & IP66
Temperature Code:
T6@60°C Max. Operating Ambient Temperature

Non-Incendive
[TDZ-HP, THZ-DIN, THZ-DH, THZ-HPP] –
Class I, Division 2, Groups A, B, C, D
Suitable for: Class II & III, Division 2, Groups F, G
Temperature Code:
TDZ-HP/THZ-DH/THZ-DIN: T4A@40°C & T4@60°C

TestSafe (Australian) Approvals:
Flame-Proof [THZ-HPP in LH2 and TDZ-HP in BH Housing]
Ex d IIC T6, IP66

Canadian Standards Association (CSA Int’l)
Intrinsically Safe [TDZ-HP, THZ-HPP] –
Class I, Division 1, Groups A-D
Non-Incendive [TDZ-HP, THZ-DIN, THZ-HPP] –
Class I, Division 2, Groups A, B, C, D
Temperature Code:
TDZ-HP/THZ-DIN: T4@40°C & T4@60°C
THZ-HPP: T6@60°C Max. Op. Amb. Temp

CENELEC/ATEX 94/9/EC Directive
