

Smart HART Transmitters, Monitors and Interfaces

Connecting a HART Device to a DCS With MODBUS

Problem: I need to interface multiple HART flowmeters to a DCS with a MODBUS interface. Do you have a solution for this?

Solution: Connect one HART device in single drop mode or up to 16 HART devices in multidrop mode to our HCS HART-to-MODBUS interface module. The HCS queries the HART devices and stores the data internally in MODBUS registers. Your DCS MODBUS card serves as the MODBUS master, querying the HCS to grab the data.

Model Number Example
HCS / HART / MB485 / 9-30DC / -RF [DIN]
