

Dual Alarm Warns Prior to Full Shutdown

Our loop requires two alarms: one to warn the control room and a second for emergency shutdown. Is there an inexpensive way to accomplish this?

Absolutely. Our SPA² Programmable Alarm Trip with two relays accepts the 4-20mA input from your transmitter then provides two relay outputs to your DCS... one for warning and the other for shutdown. Industry-best RFI protection and FM Class I, Div 2 approvals make the SPA² a great field fit for field locations too.

Model Number Example

SPA2 / HLPRG / 2PRG / U [DIN]
