

Hard Alarm Required for Insurance Policy

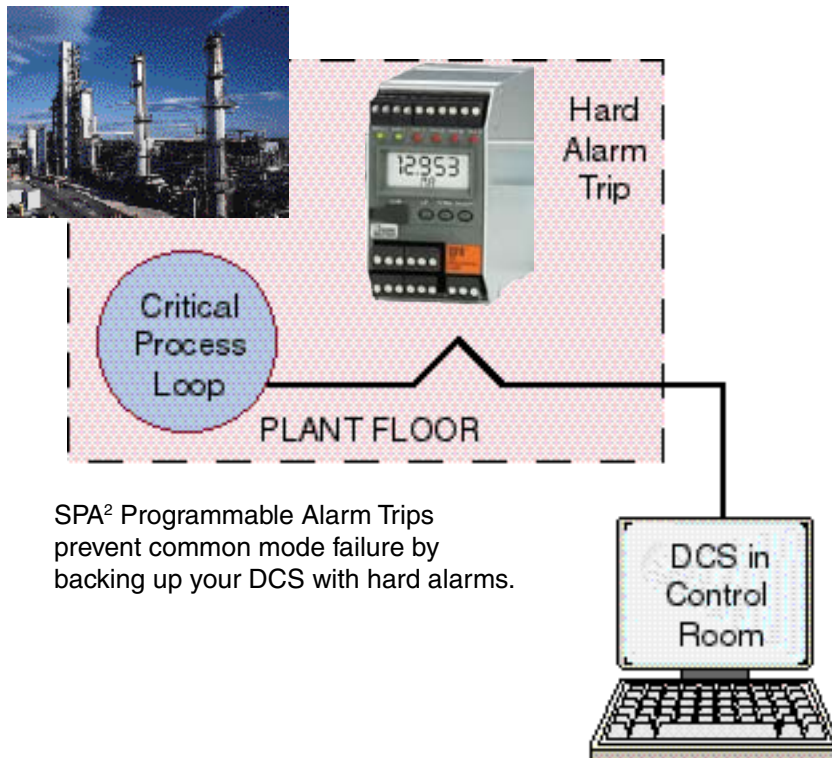

Problem: We upgraded to a DCS with alarms programmed directly into the software, but our insurance company requires a hard alarm backup. Is that standard operating procedure?

Solution: Yes! Many plants are adopting the new standards that require redundant alarm devices... especially for critical loops or processes. We supply systems with varying levels of redundancy dependant on how critical the application. Safety Instrumented Systems may be designed modularly to meet most any requirement.

Model Number Example

SPA2 / HLPRG / 4PRG / U / -AO [DIN]

Limit Alarm Trips and Switches

SPA² Programmable Alarm Trips prevent common mode failure by backing up your DCS with hard alarms.
