

Share a Process Signal at Two Locations

Problem: For a custody transfer application, we need to monitor the input from a field flow transmitter at two locations simultaneously. What's our easiest option?

Solution: The dual-output ECT signal splitter takes the input from one transmitter and sends two identical isolated outputs to two receiving devices for monitoring, recording or control.

Signal Transmitters, Isolators and Converters

Model Number Example

ECT / 1-5V / 2X4-20MA / 24DC [DIN]
